PROFESSIONAL OBJECTIVE

Improve the efficiency of the microwave and RF designers and structures. I focus on nonlinear devices at circuits level (such as HEMTs transistors) and at system level (HPA, Switches). That purpose requires an original use of an advanced RF instrumentation associated to a strong knowledge in terms of measured devices modeling.

SKILLS

Operating systems : DOS, Windows, Unix and Linux.

Programming languages : Pascal, 80x86 Assembler, C, C++, TCL/TK, JAVA, HTML, Javascript, PHP, MySQL.

Office softwares : L^AT_EX, Microsoft Office, Open Office.

Scientific softwares : Maple, Matlab, Mathematica, Scilab, Keysight's VEE and ADS, NI LabVIEW.

Characterization tools : Spectrum analyzers, scopes, AWG, VNA, LSNA, probe stations, high impedance probes. I have developed calibration procedures and automated calibration and measurements processes.

System Level Modeling : Amplifiers, modulators and mixers with splines, neural networks or Volterra expansions. Bilateral Modeling by PhD model.

Circuit Level Modeling : Linear, nonlinear and electrothermal models of HEMTs.

Languages : French, English.

CERTIFICATIONS

National Instruments Certified LabVIEW Associate Developer (CLAD) July 2014-July 2016

AWARDS

- **Best Paper Award**, European Microwave Week - Gallium Arsenide Application Symposium (GAAS), 2002

T. Reveyrand, C. Maziere, J.M. Nébus, R. Quéré, A. Mallet, L. Lapierre, J. Sombrin, "A calibrated time domain envelope measurement system for the behavioral modeling of power amplifiers", European Microwave Week, GAAS 2002, pp. 237-240, Milano, September 2002

- **Best Student Paper Award**, Journées Nationales Micro-ondes (JNM), 2007

O. Jardel, F. De Groote, T. Reveyrand, C. Charbonniaud, J.P. Teyssier, R. Quéré, D. Floriot, "Modélisation du drain-lag dans les modèles électriques grand-signal de transistors HEMTs AlGa_N/Ga_N", 15eme Journées Nationales Micro-ondes (JNM), 3C1, Toulouse, Mai 2007.

PROFESSIONAL ORGANIZATIONS

The Institute of Electrical and Electronics Engineers (IEEE)

Member of :

- IEEE MTT-S Technical Program Review Committee (TPRC) for IMS 2013-present
- MTT-11 "Microwave Measurements" technical committee 2009-present
⇒ Vice-Chair 2017-present
- "Microwave Theory and Techniques" society 2007-present
- "Instrumentation and Measurement" society 2007-2016
- Judge for IEEE MTT-S Graduate Fellowships 2014-2015
- Chair for IEEE Denver Section Jt. Chapter, AP03/MTT17 2015-2016

The European Microwave Association (EuMA)

2009-2015

EMPLOYMENT
HISTORY

Measurement Engineer (CNRS) XLIM *June 2016-present*

Lecturer University of Limoges *February 2017-March 2017*
iXEO - Master2, "Microwave Measurements"

Research Associate University of Colorado at Boulder *June 2013-May 2016*

Achievements :

- LabVIEW software for a "Do-it-yourself" Large-Signal Network Analyzer (LSNA)
- Outphasing PA characterizations

Lecturer University of Colorado, Boulder *January 2016-May 2016*
ECEN 5014-003, "Microwave Measurements and Calibration Fundamentals"

Measurement Engineer (CNRS) XLIM *December 2007-May 2013*

Achievements :

- GaN HEMTs circuits level modeling from european foundries (Thales / QinetiQ) for HPA, LNA and Switches
- Time domain measurement setup (LSNA) development on Scilab-TCL/TK (GUI, calibration and measurement automation)
- Development of HEMTs modeling tools (Scilab)
- Contractual measurements such as load-pull, linearity, high impedance probe in both frequency (VNA) and time domain (LSNA)

Research Associate - Visiting Scholar University of Colorado at Boulder *February 2012-July 2012*
GaN HEMTs based rectifiers characterizations and analysis

Research Engineer (CNRS) XLIM *May 2005-November 2007*

Achievements :

- Frequency domain load-pull measurement setup (VNA in receiver mode with pulse capabilities) development with Scilab (calibration procedures, measurement automation, data processing)
- Large signal characterization of transistor (mainly European GaN in the framework of Korrigan)
- European Project workpackage leader (Korrigan WP3.3). Development of an internet database (Php / mySQL) to let partners share data and informations
- GaN HEMTs "spice-like" nonlinear models

Research Engineer NMDG Engineering bvba *November 2004-February 2005*
High Impedance Probe module (calibration and measurements) in the commercial LSNA Software (based on Mathematica)

Postdoctoral scientist CNES (French Space Agency) *October 2003-September 2004*
Development of characterization tools interfaces within the free open-source scientific package Scilab

Postdoctoral scientist CNES (French Space Agency) *October 2002-September 2003*

Achievements :

- Large Signal Network Analysis (LSNA) characterizations in time-domain
- Development of a new LSNA module in order to investigate time domain waveforms at internal nodes of MMICs with high impedance probes (HIP) to validate circuits designs and to analyze nonlinear parametric stability
- Large Signal Network Analysis (LSNA) characterizations in time-domain

Researcher IRCOM / University of Limoges *October 1998-September 2002*

Achievements :

- Development of the RF time-domain envelope measurement setup (hardware and software)
- Development of the calibration procedure of the time-domain envelope measurement setup
- Power amplifiers characterizations : Load-pull, IM3, NPR
- Behavioral modeling of nonlinear devices with memory effects for system level
- Development of a dynamic complex gain model with neural networks

Lecturer University of Limoges *October 1998-September 2002*
RF devices, analog/digital communication systems, signal processing, propagation waves...

Postgraduate student IRCOM / University of Limoges *February 1998-July 1998*
Circuits level simulations of IM3 and NPR in order to optimize the trade-off between linearity and efficiency

EDUCATION

Ph.D in High Frequency Devices and Circuits - Electronic and Optoelectronic, April 2002
University of Limoges (France)
